OdysseyWallet

Smart Contract Audit Report

SYSFIXED

18 Jan 2023

TABLE OF CONTENTS

AUDITED DETAILS

Audited Project

Project name	Token ticker	Blockchain
OdysseyWallet	ODYS	BSC

Addresses

Contract address	0x54e951E513bC09abaFf971641947Bc69e31068bD
Contract deployer address	0x2F94f5B4Dbe2174B835217eD6Ef8ee2E8711B3e8

Project Website

https://odysseywallet.io/

Codebase

https://bscscan.com/address/0x54e951E513bC09abaFf971641947Bc69e31068bD#code

SUMMARY

Odyssey Wallet is committed to becoming the first decentralized social community Web3.0 wallet. A system that helps people quickly understand the blockchain and enter web3.0 also assists communities and media creators to interact with members.

Contract Summary

Documentation Quality

This project has a sufficient amount of documentation.

- Technical description provided.

Code Quality

The quality of the code in this project is up to standard

- The official Solidity style guide is followed.

Test Scope

Project test coverage is 100% (Via Codebase)

Audit Findings Summary

Issues Found

- SWC-101 | Arithmetic operation issues discovered on lines 194, 216, 241, 270, 271, 400, 431, 462, 472, 483, 511, 520, 526, 535, 542, 546, 566, 567, 569, 575, 576, 577, 584, 633, 641, 649, 675,
- SWC-103 | A floating pragma is set on line 7, the current pragma Solidity directive is ""^0.8.8"".
- SWC-110 | Out of bounds array access discovered on lines 595, 596, and 676. It is best practice to set the visibility of state variables explicitly to public or private.
- SWC-120 | Potential use of "block.number" as a source of randomness discovered on lines 511 and 656.

CONCLUSION

We have audited the OdysseyWallet project which has released on January 2023 to discover issues and identify potential security vulnerabilities in OdysseyWallet Project. This process is used to find technical issues and security loopholes that find some common issues in the code.

The security audit report produced satisfactory results with low-risk issues.

The most common issue found in writing code on contracts that do not pose a big risk, writing on contracts is close to the standard of writing contracts in general. Some of the low issues that were found were asserted violations and weak sources of the randomness contained in the contract

AUDIT RESULT

Article	Category	Description	Result
Default Visibility	SWC-100 SWC-108	Functions and state variables visibility should be set explicitly. Visibility levels should be specified consciously.	PASS
Integer Overflow and Underflow	SWC-101	If unchecked math is used, all math operations should be safe from overflows and underflows.	ISSUE FOUND
Outdated Compiler Version	SWC-102	It is recommended to use a recent version of the Solidity compiler.	PASS
Floating Pragma	SWC-103	Contracts should be deployed with the same compiler version and flags that they have been tested thoroughly.	ISSUE FOUND
Unchecked Call Return Value	SWC-104	The return value of a message call should be checked.	PASS
SELFDESTRUCT Instruction	SWC-106	The contract should not be self-destructible while it has funds belonging to users.	PASS
Check-Effect Interaction	SWC-107	Check-Effect-Interaction pattern should be followed if the code performs ANY external call.	PASS
Assert Violation	SWC-110	Properly functioning code should never reach a failing assert statement.	ISSUE FOUND
Deprecated Solidity Functions	SWC-111	Deprecated built-in functions should never be used.	PASS
Delegate call to Untrusted Callee	SWC-112	Delegatecalls should only be allowed to trusted addresses	PASS
DoS (Denial of Service)	SWC-113 SWC-128	Execution of the code should never be blocked by a specific contract state unless required.	PASS
Race Conditions	SWC-114	Race Conditions and Transactions Order Dependency should not be possible.	PASS

Authorization through tx.origin	SWC-115	tx.origin should not be used for authorization.	PASS
Block values as a proxy for time	SWC-116	Block numbers should not be used for time calculations.	PASS
Signature Unique Id	SWC-117 SWC-121 SWC-122	Signed messages should always have a unique id. A transaction hash should not be used as a unique id.	PASS
Shadowing State Variable	SWC-119	State variables should not be shadowed.	PASS
Weak Sources of Randomness	SWC-120	Random values should never be generated from Chain Attributes or be predictable.	ISSUE FOUND
Incorrect Inheritance Order	SWC-125	When inheriting multiple contracts, especially if they have identical functions, a developer should carefully specify inher	PASS

595   path[0] = address(this);
596   path[1] = router.WETH();
597   |
```

SWC-110 | OUT OF BOUNDS ARRAY ACCESS

LINE 596

low SEVERITY

The index access expression can cause an exception in case of use of invalid array index value.

Source File

- Odyssey.sol

Locations

```
595   path[0] = address(this);
596   path[1] = router.WETH();
597   _approve(address(this), address(router), tokenAmount);
598   |
```

SWC-110 | OUT OF BOUNDS ARRAY ACCESS

LINE 676

low SEVERITY

The index access expression can cause an exception in case of use of invalid array index value.

Source File

- Odyssey.sol

Locations

```
675   for (uint256 i = 0; i < accounts.length; i++) {
676   exemptFee[accounts[i]] = state;
677   }
678   }
```

SWC-120 | POTENTIAL USE OF "BLOCK.NUMBER" AS SOURCE OF RANDOMNESS

LINE 511

low SEVERITY

The environment variable "block.number" looks like it might be used as a source of randomness. Note that the values of variables like coinbase, gas limit, block number and timestamp are predictable and can be manipulated by a malicious miner. Also, keep in mind that attackers know hashes of earlier blocks. Don't use any of those environment variables as sources of randomness and be aware that the use of these variables introduces a certain level of trust to miners.

Source File

- Odyssey.sol

Locations

```
510   !exemptFee[recipient] &&
511   block.number < genesis_block + deadline;
512   //set fee to zero if fees in contract are handled or exempted
513   |
```

SWC-120 | POTENTIAL USE OF "BLOCK.NUMBER" AS SOURCE OF RANDOMNESS

LINE 656

low SEVERITY

The environment variable "block.number" looks like it might be used as a source of randomness. Note that the values of variables like coinbase, gas limit, block number and timestamp are predictable and can be manipulated by a malicious miner. Also, keep in mind that attackers know hashes of earlier blocks. Don't use any of those environment variables as sources of randomness and be aware that the use of these variables introduces a certain level of trust into miners.

ABOUT US

Sysfixed is a blockchain security certification organization established in 2021 with the objective to provide smart contract security services and verify their correctness in blockchain-based protocols. Sysfixed automatically scans for security vulnerabilities in Ethereum and other EVM-based blockchain smart contracts. Sysfixed a comprehensive range of analysis techniques—including static analysis, dynamic analysis, and symbolic execution—can accurately detect security vulnerabilities to provide an in-depth analysis report. With a vibrant ecosystem of world-class integration partners that amplify developer productivity, Sysfixed can be utilized in all phases of your project's lifecycle. Our team of security experts is dedicated to the research and improvement of our tools and techniques used to fortify your code.
